Engineered

for life

ITT Industries, Cannon has been innovating customer driven solutions for decades. Significant new product development and strategic acquisitions have resulted in an extensive portfolio of switch and interconnect products that is unparalleled in the industry.

Connectivity solutions for transportation and harsh environments...

Cannon's **APD / DIN 72585** connectors feature in-line and bulkhead sensors resistant to harsh environmental conditions (contaminants, vibration and shock). APD connectors offer low contact resistance which ensures maximum signal integrity.

Environmentally sealed solutions ...

In addition to our APD series we also offer these environmentally sealed connectors:

SLC Connectors

Snap (Clip) Lock Circular connectors ensure a tightly sealed connection preserving the integrity of the solid state package. Applications include: powertrain control, sensors & actuators, forklifts, agricultural and construction equipment

SLE Connectors

Snap Lock Environmental connectors. Protects against contaminants even when unmated. Applications include: safety control systems, tractors, mining equipment, engine and transmission control

CLC / Y-Splice Connectors

Clip Lock Circular environmental miniature connectors. Applications include: emission control, powertrain control, chassis control, sensors and actuators
