

---

**We provide information display devices using light, which promote energy saving and safety in the production environment as well as in our daily lives.**

Status indicating lights and revolving warning lights act as a guide giving clear directions wherever we are.

Having colors, visibility, and blinking/flashing features, lights provide communication that is internationally understood.

Based on our technological skill and experience gained in micro-motors, we have designed LED light source and maintenance-free communication tools that feature the added-value of energy-savings and increased efficiency for the needs of diverse markets.

As a top brand manufacturer, we aspire to become the global standard.

# Status Indicating Lights, Revolving Warning Lights

Assembly line for electronic components

Built-in Computer System

## Main Uses

Light as a "universal language" is used in many applications.
